

FEATURES

- ANSI Class 150, 300, or 600 flanges
- · Vertical or horizontal orientation
- Low pressure drop
- Convoluted screen for more surface area with perforations from ¹/16" to ¹/2"
- 20 to 60 mesh linings for fine straining applications

OPTIONS

- Quick open hinged or davit cover assembly bolted cover
- · Alloy construction for body and baskets
- ASME Code construction
- Steam jacket for highly viscous fluids
- Straight through or right angle configuration
- · Flanged class 600 or butt weld piping connections

Customize to Improve Performance and Meet Higher Pressure Requirements

The Model 91 fabricated T strainer, typically used for pump protection or other low solids applications has several advantages over other strainer designs. Its compact design is perfect for applications with restricted space, either vertical or horizontal installations are possible, and when cleaning the strainer, draining the vessel is not necessary. It also can be adapted for straight through or right angle flow, making it ideal for retrofit situations.

Unique Strainer Design

The unique convoluted design of the strainer screen doubles the screen area and completely changes the dirt accumulation pattern on the screen, more effectively using the screen's straining area and increasing the time between cleanings. The combination of a convoluted strainer screen and unrestricted flow path results in a very low pressure drop, ideal for applications such as condensate and boiler feed pump suction in which water quality is good and pressure drop is critical.

Strainer Screens

Strainer screens are stainless steel or other specified materials.

Cover Type Openings

For applications with infrequent basket changing, Eaton offers a simple, cost-effective, bolted cover type. It's available with a davit assembly cover for larger strainers with heavy covers, this makes it possible for a one-person operation.

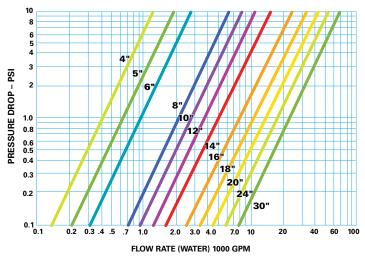

For applications with more frequent changing, Eaton offers a hinged, quick opening cover secured by swing bolts. This is adaptable for higher pressure applications. For medium size strainers, 14" to 16," a bolted slide hinge cover is available. This permits one operator to engage the hinge and open the cover.

Optional Steam Jacketing

Available in carbon steel or 316 stainless steel rated for service up to 450 °F. This is ideal for the high temperatures required to process and transport heavy, viscous fluids without affecting the function or normal maintenance of the strainer. Steam jacketing maintains critical fluid temperature throughout the strainer.

Eaton customizes the strainers to meet special application requirements. Design and fabrication to ASME section VIII and ANSI B31.1 codes are available
